

Energy and Utilities

DISRUPTION IS REAL

- Traditional Energy and Utility companies are being challenged by disruptive, lean and agile start-ups
- Digital technologies, such as artificial intelligence and IoT are set to revolutionise the workplace and the impact on utility & energy sector will be disruptive
- Ability to adapt to an uncertain environment is being challenged by the mature organisational structures, legacy strategy and infrastructure of companies
- Huge cost pressures create a paradox - Increasing upskilling needs but declining L&D budgets

TOP SKILLS BY 2025*

Artificial Intelligence	Power Storage & Generation
Cloud Computing	Text, Image & Voice Processing
Cybersecurity	Internet of Things
